  2019

About Me

To obtain a software development job where I may use my basic understanding of coding and software engineering. Committed to making a meaningful contribution to projects, working in a team setting, and accepting ongoing education to foster creative thinking that aligns with industry best practices.

Professional Experience

Cogneesol Pvt. Ltd. | Mohali, Punjab, IN
Internship
Aug 2023 – Jan 2024

Key responsibilities:
- Developed, implemented, and maintained internal Java programming solutions, gaining hands-on expertise in software development.
- Successfully identified and reported bugs for the company's ongoing flagship project, contributing to its overall improvement and reliability.
- Executed manual testing of various projects, ensuring the quality and reliability of the software.

Projects

Pet Boarding System:
- Domain: Web Application | Programming Languages: Html, CSS, JavaScript, Bootstrap
- Built a website for pet boarding that is integrated with a powerful API to retrieve dog information in real time, improving customer experience.
- Created a feature-rich package services system with scalable packages for easy reservations.

Pizza bill generator :
- Domain : Application Program | Programming Languages : JAVA
- Developed a Java-based application to generate pizza bills that dynamically computes and shows each pizza's price as well as the running subtotal while the consumer chooses their pizza, encouraging openness and understanding.
- Included a configurable feature that gives customers more control over their orders by letting them choose the sizes, quantities, and toppings they choose for their pizzas.
- Created a user-friendly, intuitive interface that makes ordering pizza easier and more efficient.
